Main technical features:

1. Working conditions:
 - Ambient Temperature: 10-40 °C,
 - Rel.humidity, non condensing: 90%RH;
2. Power supply: 3 x 380V / 50Hz (or 60Hz);
3. Power consumption: up to 125 KVA
4. Number of independent charge/discharge channels: 4; All circuits are galvanically isolated.
5. Ability to work in parallel mode;
6. Output current in charge and discharge mode for single channel: 0 - 75A;
7. Max. output current in parallel mode : up to 300A (depending on number of channels working in parallel);
8. Output voltage : 15 - 360V;
9. Accuracy of current : $\pm 0.5\%$ Full Scale. Resolution: 0.01 A;
10. Accuracy of voltage : $\pm 0.1\%$ Full Scale. Resolution: 0.1V;
11. ADC : 16 bit;
12. Circuit voltage measurement for each channel;
13. Temperature measurement for each channel;
14. Work modes:
 - Charge,
 - Discharge,
 - CC (constant current),
 - CV (constant voltage),
 - CP (constant power);
15. Microprocessor control;
16. Interface for connection to a centralized management system – RS485;
17. PLC for each channel, which provides:

- Temporary storage of process's data in case of a lost connection to a PC and immediately sending it to the PC when connection is restored ;
 - Visualization of main process's parameters-current, voltage, amperhours etc.;
 - Auto restart after restoring of broken power supply;
 - Data acquisition rate – 100 ms;
18. Electronic commutation when switching charge and discharge modes;
19. Mechanical construction :
- All essential circuit components such as fuses, pulse control boards, SCR's, and contactors are mounted on pannels. This can be easily serviced in case of a component failure.
 - Cabinet dimensions (W x D x H) [mm] : 750 x 800 x 2000;
 - The total weight is estimated about 900 kg;
20. Components used:
- Power transformers and chokes – AQ group AB;
 - Thyristors modules – Semikron or IR;
 - Fuses, contactors and relies – Schneider electric and ABB.
21. Operator safety:
- All outputs are galvanic isolated;
 - A main circuit breaker protects personnel when performing maintenance on the rectifier cabinet;
 - Each circuit is protected by a 3-pole breaker and contactor to isolate the circuit from the high voltage of the main transformer and the string of batteries.

Test management and data logging software : Battery Test Manager (BTM 2.0) :

- Creation and editing of programs,
- Grouping circuits for parallel work,
- Uploading, starting, stopping and interrupting of programs.
- Visualization of current state on main window,

- Storing sample measurement data for all processes in a database,
- Visualization of stored data from database, drawing charts etc.,
- Printing report data,
- Export to Excel.
